

# HMC's Course: Introduction to Naval Architecture

Press release: December 12th 2016

## From 18th - 19th January 2017, HMC will provide a course “Introduction to Naval Architecture” in Almere, The Netherlands.

For almost 30 years HMC has gained a lot of knowledge in offshore maritime projects and heavy transport engineering. HMC supports companies worldwide with their projects. HMC provides courses, presentations and guest lectures at maritime colleges, universities and all kind of companies which are connected with the maritime industry. We strongly believe that education needs to be an integrated part of doing business. Our long worldwide experience and expertise in the field has led to the development of our own products and courses. The course 'Introduction to Naval Architecture' is all about gaining general knowledge in the working field of naval architecture. The course enables attendees to gain general understanding on how naval architecture impacts their work in the maritime industry. The course is suitable for a wide audience in the industry and for those who need or want to gain knowledge of naval architecture and shipbuilding. If you are a technical professional who now works in another discipline or you have contact with shipping companies or shipbuilders on a regular base this course can be of interest to you. Our courses and presentations are supported with course books developed by HMC.

If you have any questions about this course, our education program or any of our other services and products, please do not hesitate to contact us at [info@hmc.nl](mailto:info@hmc.nl) or visit our website at [www.hmc.nl](http://www.hmc.nl)
