

CrewPlan 6

HMC's Crew Administration and Planning software

CrewPlan 6 is the solution for crew planning and administration. CrewPlan 6 features a Gantt chart in which the planning per ship as well as crewmember specific data is kept, such as on and off times, expiry dates of legal documents, certificates and planning and registry of medical checks. A unique ability in CrewPlan 6 is the schedule check: CrewPlan 6 lists all inconsistencies and warns for future planning problems so that users can act in advance and plan ahead, diminishing planning problems.

CrewPlan 6

Every shipping company or affiliate company in the shipping industry has to cope with a difficult planning of crewing and personnel. Limited on and off times, certificates with expiry dates and compulsory medical checks regularly cause stress and even fines on both vessels and the back office. This situation was enough reason for HMC, maritime engineering and business software developer, to invest in a solution. Being a supplier of both engineering works and operational solutions HMC used its 30 years of experience in the industry to design CrewPlan to the specific needs of the shipping and offshore industry.

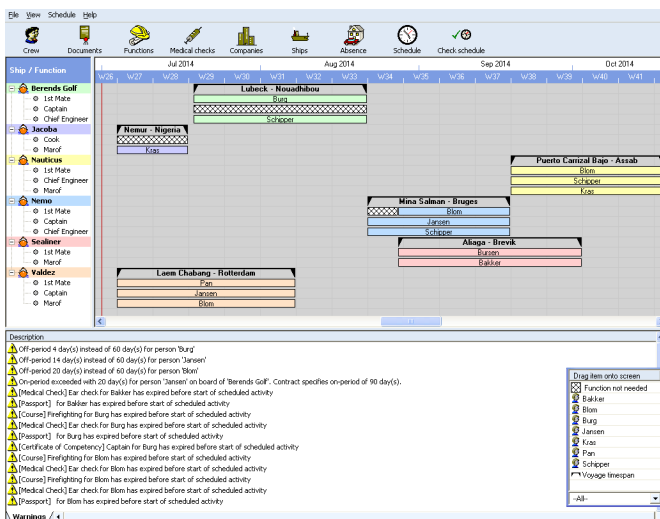

Features

- Planning of on and off times
- Crew administration database
- Drag & drop Gantt chart
- Automatic schedule check on:
 - double placement of crew
 - all required functions are filled
 - expiry dates of certificates, medical checks etc.
- All certificates and checks are user definable
- Person-view, ship-view and function-view lay-out
- Link external documents (e.g. pdf, doc, jpg) to planning items

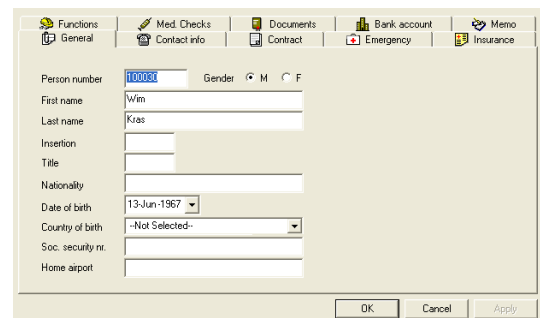

Why choose CrewPlan 6?

- Uncomplicated straight forward administration and crewing software.
- Ability to combine personal and voyage schedules with certificates and all relevant expiry dates.
- Automatic warnings for any faults or future problems in your schedule.
