

# HMC extends education program

Press release: 19 september 2013

## Learn, unlearn and relearn with HMC's Maritime Education (ME)

HMC's business unit Maritime Education has been established late 2011 to group and focus HMC's activities in education and knowledge sharing. Our experience within transport engineering, marine operations and projects, which was obtained in the other two business units for over 25 years, is shared with the industry via courses and seminars. Regular education is also supported with cases, guest lectures and co-makership traineeships in close cooperation with local schools and universities.

*The Minister of Economic Affairs of The Netherlands, Mr Henk Kamp is very satisfied with the strong increase of students who choose a technical study. Mr Kamp indicates on the website of Economic Affairs "Sustainable economic growth and a stronger Dutch economy. That's where I will be directing my efforts in the coming years. Businesses create jobs and income and give people a future perspective." HMC is aware of her social responsibility and responds by extending her portfolio with some new interesting courses.*

### Seminar: New Generation of Anchor Handling

One of the seminars is about the New Generation of Anchor Handling. Nowadays anchor handling requires special equipment and skills. This course will give a practical knowledge of the technologies especially pertaining to anchor handling. The course can be attended by oil and gas operators, vessel owners and shipbuilders.

### Seminar: Warranty Surveyor

Marine Warranty Surveyor (MWS) is about all technical aspects required to successfully and safely execute a variety of offshore transport operations. The seminar teaches engineers, naval architects and key personnel the most important aspects of transporting these offshore giants. In addition to the technical content, MWS focuses on rules and regulations important to warranty surveyors on transport jobs. The course uses DNV rules and regulations in addition to practical business cases. Other subjects are the contents of a Class approved transport manual, calculation methods of wet and dry-tow operations, configuration of cribbing and more. If you are an engineer, technician, and want to know about offshore transport engineering, or you are a non technical manager, in need of an introduction to the technical problems within your organization, you should attend the Marine Warranty Surveyor course.

### Seminar: Transport Engineering in the Oil and Gas industry

The third new seminar is about Transport Engineering in the Oil and Gas industry. Oil and gas installations both onshore as well as offshore are often being built in modules and components on a different location than the location where those facilities are operated. The course will address all issues related to transport and the effect on the design such as loads, fatigue, internal sea fastening and design for transport. This seminar is aimed at EPC companies, oil and gas operators, design companies, shipbuilders, marine offshore companies and offshore transportation companies.

## Learn, unlearn and relearn with HMC's Maritime Education (ME)

### Seminar: Marine Steel Wire Ropes

Our latest new seminar is about inspection, maintenance, selection and application of marine steel wire ropes. This course is about the construction and dynamic behavior of wires, strength analyses, fatigue in wires and the rules and regulations. This seminar is primarily aimed at field managers and superintendents, marine engineers marine operations managers and captains, masters and marine officers.

### Mathematics, Physics and Custom Tailored Education

Other subjects ME teaches are mathematics and physics for maritime applications. Furthermore we can deliver custom tailored company courses. All educational activities performed by HMC are based on our internally developed course materials and consist of a broad collection of presentations, assignments, books and working materials. HMC can offer all courses and seminars worldwide through our offices in The Netherlands, Japan and Korea.

In case you are an organizer of such events and would like to know what kind of courses suit your educational needs please contact our office via [info@hmc.nl](mailto:info@hmc.nl) or one of our local offices.

Please visit our website for more information.
